

a storage device comprising configuration data stored thereon, wherein the configuration data indicates both:

a data format supported by each of a plurality of recipient devices,

wherein the data format supported by each of the plurality of recipient devices is different than the data formats supported by the other recipient devices from the plurality of recipient devices

and how to convert network device status data, received from a network device,

that conforms to a first data format into each of the data formats supported by the plurality of recipient devices

a conversion mechanism configured to

process the network device status data that conforms to the first data format

and generate, based upon the configuration data and the network device status data,

report data that conforms to the data format supported by each of the plurality of recipient devices,

network device status data includes identification data that uniquely identifies an intended recipient device so that the report data is routed to the intended recipient device
